# SULAPAC

## TECHNICAL DATA SHEET

04.03.2025 Version 3.2

## SULAPAC FLOW 1.8 - EX1014.2NC

## SULAPAC FLOW 1.8 WITH RECYCLED CONTENT - EX1014.3NC

Sulapac Flow 1.8 is a sustainable solution for extrusion. With outstanding functional properties it's ideal for extrusion profiles, such as cosmetic pencil barrels.

| TYPICAL MATERIAL PROPERTIES                       |                          |  |
|---|--------------------------|--|
|   | EX1014.2NC<br>EX1014.3NC |  |
| PHYSICAL PROPERTIES                               |                          |  |
| Hardness (Shore D)                                | 84                       |  |
| Material density (g/cm <sup>3</sup> )             | 1,26                     |  |
| Bulk density (g/cm <sup>3</sup> )                 | 0,72                     |  |
| TENSILE PROPERTIES (ISO 527-1)                    |                          |  |
| Tensile strength at yield (MPa)                   | 35                       |  |
| Tensile modulus (GPa)                             | 2,1                      |  |
| Tensile strain at yield (%)                       | 3                        |  |
| Tensile strain at break (%)                       | 8                        |  |
| FLEXURAL PROPERTIES (ISO 178)                     |                          |  |
| Flexural strength at max load (MPa)               | 54                       |  |
| Flexural modulus (GPa)                            | 2,4                      |  |
| Flexural strain at max load (%)                   | 4,5                      |  |
| IMPACT PROPERTIES (Unnotched, ISO 179-1)          |                          |  |
| Charpy impact strength (kJ/m <sup>2</sup> )       | 33                       |  |
| RHEOLOGICAL PROPERTIES (ISO 1133) (190°C/2,16 kg) |                          |  |
| MFI (g/10min)                                     | 3                        |  |
| HEAT RESISTANCE                                   |                          |  |
| HDT-B (°C)  | 54                       |  |
| Melting point (°C)                                | 151                      |  |
| Glass transition temperature (°C)                 | 58                       |  |

## SULAPAC

#### **BIOBASED CONTENT (ASTM D6866)**

Biobased content (%)

72

#### MATERIAL COLOUR

Due to the natural origin of wood, colour variation is possible both between and within material batches.

## DRYING AND MASTERBATCH INSTRUCTIONS

#### DRYING

- Before processing, the granules should be dried using a dehumidifying dryer or a vacuum dryer
  - Dehumidifying dryer: the granules should be dried for at least 5-6 hours at 80°C
  - Vacuum dryer: the granules should be first dried for at least 20 minutes at 80°C
- The best end result will be achieved if the residual moisture of the granules is < 0,2 %
- · After drying, avoid exposing the material to ambient conditions
- · Moisture content can lead to hydrolysis

#### MASTERBATCH

- Sulapac materials can be colored in the same way as conventional plastics. With Sulapac materials use color masterbatches with biodegradable carriers; PLA, PHA, PBAT, PBS. For further information, please see Sulapac color masterbatch guide.
- If color masterbatch is added, the granules should be cooled down to 50°C in order to avoid the agglomeration of color masterbatch granules

## **EXTRUSION - PROCESSING CONDITIONS**

#### **GENERAL INSTRUCTIONS**

- Typical settings may require optimization
- Avoid using temperatures above 200°C in order to lower the risk of wood and polymer degradation
- The dwell time of the material shall be reduced to minimum in order to lower the risk of thermal degradation
- · Decreasing temperature profile is recommended

#### **RECOMMENDED TEMPERATURES**

| Feed zone                 | 20 – 40 °C   |
|---------------------------|--------------|
| Melting zone              | 165 – 185 °C |
| Mixing and convoying zone | 170 – 190 °C |
| Die                       | 180 – 190 °C |

## PURGING INSTRUCTIONS

#### **BEFORE PRODUCTION**

• Purge the extruder with PP or PE

#### **DURING PRODUCTION**

- · The material is heat sensitive. Avoid high processing temperatures and long dwell times
- If an extensive amount of burned material or fumes starts to appear in the products, try lowering
  processing temperature
- · In case of production break flush the extruder with fresh material

#### AFTER PRODUCTION

- · Purge the extruder with PP or PE
- · Clean up the die after production

## STORAGE, TRANSPORTATION AND SHELF-LIFE

#### STORAGE

- In original unopened packaging at temperatures below 45°C
- · Once opened, reseal the package after each use
- · In dry conditions and avoid exposure to high humidity and rain
- · Away from direct sunlight

#### TRANSPORTATION

Temperatures during transportation may not exceed 60°C

#### SHELF-LIFE

- Shelf-life is from the date of manufacture, for unopened bags at room temperature (23°C)
- Date of manufacture can be found on the label attached to the original packaging
